

## Chapter 12 - Urinary system and male reproductive organs

We will assume the procedures listed below (when needed) are part and parcel of all endoscopic therapeutic procedures of the urethra, prostate, bladder, ureter and kidney. This includes procedures such as the resection of bladder tumours and transurethral resection of the prostate (TURP) as well as the insertion and removal of JJ stents and retrograde pyelography.

- M4510 – Diagnostic endoscopic examination of bladder (flexible cystoscopy) +/- any biopsy
- M7700 – Diagnostic endoscopic examination of urethra (as sole procedure) (including cystoscopy)
- M3000 – Endoscopic examination of ureter (+/- cystoscopy and insertion/removal of stent) +/- retrograde pyelography

The procedures listed below are only covered when the primary pathology being treated is a urethral stricture unless there are exceptional circumstances. Where the procedure is carried out to gain access for a cystoscope or other such instrument, additional fees should not be charged.

- M7920 – Dilatation of urethra (including cystoscopy)
- M7940 – Internal urethrotomy (including cystoscopy)
- M5820 – Dilatation of outlet of female bladder (with cystoscopy)

The codes for the various procedures used for the extraction of calculi are inclusive of cystoscopy, diagnostic ureteroscopy, retrograde pyelography and insertion of stent procedures where required. We may consider paying an additional fee for particularly difficult procedures on a case by case basis subject to receipt of a full medical report. This does not apply to the insertion or removal of stent when this procedure is performed at a different time from the main procedure.

Charges should not be made for anaesthesia with flexible cystoscopy.
